

Quiz Game with Categories:

A trivia game where questions are stored in a dictionary. Loop through questions, take input answers, track score with a number and use if/elif for right/wrong/quit. The category menu shows dictionary use clearly, and scoring shows numbers and strings working together.

To Do List Manager:

menu program that add tasks, mark done, remove, view. Tasks held in a list (or a list of dicts). while loop for the menu, if/elif for choices, input for everything.

Budget / Expense Tracker (session-based):

adds expenses by category in a while loop. Store categories and running totals in a dictionary, individual entries in a list. Use if/elif for the menu (add / view summary / quit), numbers for the math, and loop through the list to print a report with simple statistics like total and average.
